                                                                                                                                                                                                                                                                                                                           EMBL;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (NOV-1995) to the EMBL/GenBank/DDBJ databases.

-i- FUNCTION: CALCIUM/CALMODULIN-DEPENDENT ENZYME RESPONSIBLE FOR SMOOTH MUSCLE CONTRACTION VIA PHOSPHORYLATION OF A SPECIFIC SERINE IN THE N-TERMINUS OF MYOSIN LIGHT CHAINS (MLC), AN EVENT THAT FACILITATES MYOSIN INTERACTION WITH ACTIL FILAMENTS. CENTRAL DETERMINANT IN THE DEVELOPMENT OF VASCULAR PERMEABILITY AND TISSUE EDEMA FORMATION. IN THE NERVOUS SYSTEM IT HAS BEEN SHOWN TO CONTROL THE GROWTH INITIATION OF ASTROCYTIC PROCESSES IN CULTURE AND TO PARTICIPATE IN TRANSMITTER RELEASE AT SYNAPSES FORMED BETWEEN CULTURED SYMPATHETIC GANGLION CELLS. CRITICAL PARTICIPANT IN SIGNALING SEQUENCES THAT RESULT IN FIBROBLAST APOPTOSIS.

-I- CATALYTIC ACTIVITY: ATP + [myosin light-chain] = ADP + [myosin light-chain]
                                                                                                                                                                                                                                                                                                                                                                                                between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. TISSUE SPECIFICITY: HIGHLY EXPRESSED IN LUNG, LIVER, PANCREAS,
KIDNEY, PLACENTA AND MELANOCYTES. WEAKLY EXPRESSED IN THYROID
GLAND, OVARY, BRAIN, HEART AND SKELETAL MUSCLE. ALSO EXPRESSED
ERYTHROLEUKEMIA CELLS. BUT NOT EXPRESSED IN COLON.
SIMILARITY: BELONGS TO THE TYR FAMILY OF PROTEIN KINASES. INSUI

(without alignments) 1946.300 Million cell updates/sec

Title: Perfect score: US-09-729-264-6 2077

Scoring table: BLOSUM62

Gapop 10.0 , Gapext 0.5

283224

283224 seqs, 96134422 residues

Total number of hits satisfying chosen parameters:

DB seq length: 0
DB seq length: 2000000000

Post-processing: Minimum Match 0%

Listing Maximum Match Match 100% first 45 summaries

Database :

score is derived No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, s derived by analysis of the total score distribution.

A; Experimental source: lung

A; Note: sequence extracted from NCBI backbone (NCBIP:109438)

C:Comment: Advanced glycosylation end products are heterogeneous nonenzymatically gly cellular function, thus contributing to tissue lesions in diabetes.

C:Comment: This receptor appears also to mediate the effects of amyloid beta peptide ates in the neurotoxic pathway that produces dementia in Alzheimer's disease.

A;Gene: GDB:AGER A;Cross-references: GDB:306354; OMIM:600214 A;Map position: 6p21.3-6p21.3 A;Introns: 18/1; 53/3; 119/1; 140/3; 170/1; 231/1; 274/3; 322/1; 331/1; 373/2

C; Function:

A;Description: neuronal receptor for amphoterin, a DNA-binding protein involved in ne C;Superfamily: advanced glycosylation end products receptor; imm:noglobulin homology C;Keywords: Alzheiner's disease; glycoprotein; receptor; transmembrane protein | E;1-22/Domain: signal sequence #status predicted <SIG> E;23-404/Product: advanced glycosylation end products receptor #status predicted <MAT E;23-344/Domain: extracellular #status predicted <EXT> E;31-101/Domain: immunoglobulin homology <IM1>

       Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
